Quick Installation Guide TT4030

Getting started

Check that your delivery includes all of the following:

- Thermal transfer printer
- Power cable
- Product safety instructions
- RMA maintenance form
- Ribbon core
- USB cable
- WLAN device
- CD-ROM (driver, operator manual, demo software)

1
- Place the printer on a flat, stable surface
- Connect the device to the power supply
- Turn the printer on

2
- Open the cover (A)

Insert material

3
- Turn the ring counterclockwise to release the margin stop (B)
- Remove the margin stop (B)

4
- Load the consumable material onto the roll holder (C) – the printable side of the material needs to face up
- Turn the ring clockwise to close the margin stop (B)

5
- Guide the consumable material strip towards the print head

6
- Move and position the guides closely to the edges of the material by turning the knob (F) – do not squeeze the material

7
- The sensor position (H) is indicated by a yellow lamp
- Loosen the screw (I)
- Position the sensor (H) by using the handle (G) so it can detect the gaps between the labels or cut-out marks
- Tighten the screw (I)

Insert ribbon and start print

8
- Load the transfer ribbon (J) onto the hub (D) - make sure it is centered
- The colour-coated side of the ribbon needs to face the consumable and not the printhead

9
- Guide transfer ribbon through the printing unit as shown
- Stick the leading end of the colour ribbon to the ribbon core with adhesive tape
- Turn the colour ribbon winder counterclockwise to smooth out the colour ribbon feed
- Turn the rotary knobs (K) counterclockwise until the colour ribbon roll is fixed

10
- Turn the lever (E) clockwise to lock the printhead

11
- Close the cover (A)

12
- Install the driver and the software TagPrint Pro
- The printer is ready for printing
